Logger temperature monitor: official experiment period

Macro: plot_logger1_temeparue.cc

Execution date: 2026-09-07

Input dates: 2025-11-10 through 2025-11-25 (JST, UTC+09)

Logger: logger1.monitor.k18br; quantity: ch04_value (second temperature) [degC]

Points are 30-minute fixed-bin means.

Colored boxes show the min--max spread of the 10-minute means.

Y-axis range on every graph: 20 to 25 degC

Averaged points: 768

Pedestal: Gaussian fit to stored BAC_ADC_seg4U (= bac_adc_u[4]) histogram.

Runs: hodo_735.yml; only files with valid G_ON/G_OFF and ROOT output are used.
